                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AC006931 116205 bp DNA PLN 05-APR-2000 Arabidopsis thaliana chromosome II section 231 of 255 of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      submitted (09-MAR-2000) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 2050, USA On Dec 17. 1999 this sequence version replaced gi:4512656. The sequence and annotation of chromosome 2 were merged from those of the individual clones on this chromosome after removing overlaps. For detailed information, please see the TIGR web site (http://www.tigr.org/tdb/at/at.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE). Simple repeats were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Arabidopsis thaliana
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            thale cress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         complete sequence against a peptide database and plant EST databases at TIGR, and manual curations based on those analyses.                                                      This nucleotide sequence encodes the human cytochrome P450RAI. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Retinoid regulated gene; cytochrome P450 oxidative metabolism; P450RAI; retinoic a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC protein (see AAW44160) designated hp450RAI. The encoded protein is a CC protein (see AAW44160) designated hp450RAI. The encoded protein is a CC retinoid oxidase that has the ability to hydroxylate retinoic acid C2 at the 4 position of the beta-ionone ring and is inducible in CC epithelial cells exposed to retinoic acid. To isolate the clone, CC zebrafish p450RAI was used to search an expressed sequence tag CC database, and an isolated clone was used to screen a CDNA library CC generated from an NT2 cell line treated with retinoic acid. The CC pandaman description of CC and mouse p450RAI clone was eavel to 10423-24. Zebrafish, human CC and mouse p450RAI clone (see AAV12203-05) are claimed. They CC can be used in the recombinant production of p450RAI. Antisense CC nucleic acids can be used in a claimed method for inhibiting CC retinoic acid hydroxylation for the treatment of cancer, actinic CC keratosis, oral leukoplakia, secondary tumours of the head and/or CC neck, non-small cell lung carcinomas, basal cell carcinomas, acute promptory to leukaemia, skin cancer, and premalignancy associated CC with actinic keratosis, acne, psoriasis and/or ichthyosis.

                                                              The present sequence encodes a human protein, designated PSEC64, which is related to neuron growth. The PSEC64 protein and its gene can be used for the development of a preventive agent for use in the treatment of diseases in which nerves are involved.
                                                                                                                                                                                                                Claim 2; Page 8-10; 13pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                      This nucleotide sequence encoding an isoform of cytochrome P450RAI. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying DNA encoding inducible or suppressible cytochrome P450 by screening for drugs which reduce the catabolism of retinoic acid, useful in cancer chemotherapy and the treatment of acne and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This cDNA clone codes for a novel mouse retinoid metabolising protein (see AAW44160) designated mp450RAI. The encoded protein is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring and is inducible in cepithelial cells exposed to retinoic acid. The clone was isolated from a retinoic acid-treated p19 teratocarcinoma CDNA library using human p450RAI cDNA (see AAV12204) as probe. Zebrafish, human acid mouse p450RAI cDNA clones (see AAV12203-05) are claimed. They can be used in the recombinant production of p450RAI proteins. Antisense nucleic acids can be used in a claimed method for cancer extinoic acid hydroxylation for the treatment of cancer, and/or neck, non-small ceil lung carcinomas, basal cell carcinomas, cacute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or the P450RAI cacute passociated with actinic keratosis, acne, psoriasis and/or the P450RAI cacute passociated sequences (see AAV12206-08) for the P450RAI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Align seg 1/1 to: AAV12205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Percent Similarity:

                                                                                                                                                     This nucleotide sequence encodes the cytochrome zP450RAI of the zebra fish. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cepithelial cells exposed to retinoic acid. To isolate the clone, transcripts present in fin tissue regenerating in the presence or absence of retinoic acid were compared using a differential display pCR technique, and an isolated clone (see AAV12213) was used to screen a D. rerio 6-18 hr embryo cDNA library. Human (see AAV12204) and mouse (see AAV12205) p450RAI clones have also been identified. The isolated clones can be used in the recombinant production of later p450RAI proteins. Antisense nucleic acids can be used in a claimed method for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, psoriasis and/or ichthyosis. Promoter sequences (see AAV12206-08) are also
                                                                                                                                                                                                                                                                                                              Align seg 1/1
                                                                                                                                                                                                                                                                                                                                                                                           Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Retinoid metabolising protein - e.g. cancer, actinic keratosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-OCT-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1314
This sequence comprises a genomic clone of a novel mouse retinoid metabolising protein designated mP450RAI. A cDNA clone (see AAV12205) that includes a coding sequence for the full-length mP450RAI protein (see AAW44161) is also provided. The encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1364
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1264

alignment_block: US-09-668-482-4 x AAV12216 alignment_scores:
Quality: 1712.00
Ratio: 4.019
Percent Similarity: 40.727 Align seg 1/1 to: AAV12216 from: 1. protein is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring and is inducible in epithelial cells exposed to retinoic acid. Zebrafish, human and mouse p450RAI cDNA clones (see AAV12203-05) are claimed. They can be used in the recombinant production of p450RAI. Antisense sequences can be used in a claimed method for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukeemia, kin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or ichthyosis. Promotes sequences (see AAV12206-08) for the P450RAI genes are also claimed. Human retinoid metabolising protein hP450RAI genomic DNA

Retinoid metabolising protein; P450RAI; retinoid oxidase; retinoic acid; human; inhibitor; antisense; cancer; actinic keratosis; oral leukoplakia; head tumour; neck tumour;

```
This sequence comprises a genomic clone of a novel human retinoid cometabolising protein designated hP450RAI. Another genomic clone (see AAV12215) is also provided, as well as a cDNA clone (see AAV12204) that includes a coding sequence for the full-length hP450RAI composed to retinoid subject that includes a coding sequence for the full-length hP450RAI composed to highly to hydroxylate retinoid actid at the 4 position composed to retinoic acid. The hP450RAI gene has been localised to composed to retinoic acid. The hP450RAI gene has been localised to composed to retinoic acid. The hP450RAI gene has been localised to composed to retinoic acid. The hP450RAI gene has been localised to composed to retinoic acid. They can be used in the recombinant composed to are claimed. They can be used in the recombinant composed to a composed to a composed to a composed to acid med method for inhibiting retinoic acid hydroxylation for the composed to cancer, actinic keratosis, oral leukoplakia, secondary the composed to compose acid with actinic keratosis, acne, composed to compose acid with actinic keratosis, acne, composed to compose acid composed to composed to compose acid composed to composed to compose acid composed to compose acid composed to compose
                                                                                                                                                                                                                                                                                                                                                                                                                                   alignment_block:

The hydroxylase can be used to identify brassinosteroids or brassinosteroid inhibitors, useful to produce plants with modified physiological and/or phenotypic characteristics. The modified plants may show, e.g. stimulation of growth, increased cell elongation, increased wood production, accelerated seed germination at low temperatures, an increase in dry weight, repressed anthocyanin production during growth in light and/or inhibited de-etiolation which is induced, e.g. by cytokinin, in the dark or an increase in stress tolerance. The hydroxylase or its coding sequence can also be used for the recombinant production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Arabidopsis thaliana
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated plant cytochrome P450-type hydroxylase gene - used to identify substances acting as brassino-steroid(s) or brassinosteroid inhibitors for the production of modified plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1997-489649/45
